CUGH Global Health Education Competencies Tool Kit

This is a tool kit (2017) that provides learning objects and curricular content to support the competencies for those proficiency/trainee levels. The tool kit went through several iterations of peer review, however its contributors acknowledge that it is a work-in-progress and starting point, rather than a definitive, comprehensive resource. A second iteration will be released in the Summer/Fall 2018.

The Global Health Delivery Project at Harvard University: Case Collection

The growing collection of free Cases in Global Health Delivery includes Harvard Business School-style teaching cases, brief cases and concept notes that examine programmatic, organizational, and policy-related decisions global health leaders face across various disease conditions and health care delivery systems in resource-limited settings. Teaching notes are available at no cost to registered faculty through [Harvard Business Publishing](#) and [The Case Centre](#) to support undergraduate- or graduate-level courses and executive education.
